Education

Teerthanker Mahaveer University Moradabad, Uttar Pradesh
Bachelor of Technology in Computer Science and Engineering *Aug 2023 – Expected Jun 2027*

- **Coursework:** Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks.

Technical Skills

Languages: Python, JavaScript (ES6+), SQL (PostgreSQL, MySQL), Bash/Shell Scripting, C/C++, HTML5/CSS3
Web & Backend Services: Node.js, Express.js, RESTful APIs, WebSockets, React.js, Full-Stack Architecture
Databases & Cloud: PostgreSQL, Supabase, MongoDB, AWS (EC2, S3, IAM), Google Cloud Platform (GCP)
Systems, Tools & DevOps: Linux (Ubuntu/Debian), systemd, Docker, Git, GitHub Actions (CI/CD Workflows), n8n Automation

Experience

Cyber Security Engineering Intern Jun 2026 – Jul 2026
Uttar Pradesh Police (Amroha Cyber Security Program - APCSIP) *Amroha, UP*

- Audited production Linux server auth logs (`/var/log/auth.log`) to detect brute-force reconnaissance patterns.
- Engineered automated Python and Bash scripts for server hardening, reducing manual security audit overhead.
- Analyzed real-world cybercrime mechanisms, incident traces, and forensic workflows under law enforcement supervision.
- Implemented dynamic host isolation routines and assisted in incident response protocols to mitigate network attacks.

Full-Stack Developer & Systems Builder Jan 2024 – Present
Haque And Sons *Remote*

- Architected and deployed 3 production web applications (*CollabSheets*, *ProResume-Builder*, *Nestfy*) with secure auth.
- Engineered performant backend services using Node.js and Express, ensuring modularity, clean error handling, and testability.
- Configured relational schema migrations, indexing, and query optimizations in PostgreSQL to enhance data retrieval speeds.

Technical Projects

CollabSheets – Real-Time Concurrent Workspace | *React, Node.js, WebSockets, PostgreSQL* GitHub

- Built a real-time collaborative spreadsheet platform supporting simultaneous multi-user data editing with sub-50ms sync latency.
- Engineered WebSocket event-driven communication channels to broadcast differential state updates across active user sessions.
- Designed normalized PostgreSQL schema models to persist historical edit records and prevent transactional state conflicts.

SentinelDaemon – Linux Automation & System Daemon | *Python, systemd, Netfilter, Linux Internals* GitHub

- Developed an event-driven system daemon that tails authentication streams in real-time to mitigate brute-force attempts.
- Engineered an in-memory sliding-window state machine that isolates anomalous traffic within $< 2ms$ detection-to-action latency.
- Programmatically appended kernel-level firewall directives, blocking 14 hostile targets during testing with 0 false positives.

Threat Intelligence Log Parser | *Python, urllib, Threat Feeds, SIEM JSON* GitHub

- Built a modular log processing pipeline that digests unstructured server access logs and extracts suspicious payload patterns.
- Correlated extracted host indicators against 118,800+ live threat intelligence feeds in 1.86s and structured SIEM-ready JSON.

Leadership & Honors

Cyber Security Certification: Cyber Security Engineering Program Completion – Uttar Pradesh Police (APCSIP-2026).
Team Lead – UIDAI Data Hackathon: Directed a 4-member team analyzing large-scale demographic data trends and building pipeline models.
Aspire Leaders Program: Selected for the global cohort hosted by the Aspire Institute (founded by Harvard University faculty).
Technical Certifications: Introduction to Generative AI (Google Cloud), GitHub Actions (GitHub), Ethical Hacking (NPTEL/SWAYAM).
